

YourVoice. Control Your Bed. With YourVoice.

Independence, Comfort & Safety – Hands-Free

Developed by the team behind **Silverback Digital**, Australia's leading Smart Home AT group, **YourVoice** gives your clients the ability to adjust their beds with simple voice commands.

How YourVoice makes life better

- **Independence** – no waiting for assistance for bed adjustments.
- **Comfort and support** - better pressure care management
- **Pain relief, improved breathing** – quick adjustments, memory positions
- **Safety** – Reduced falls risk. Easier transfers
- **Smart Home Integration** - bed control as part of whole-of-home smart environment

Who Will Benefit

YourVoice is designed for clients with:

- **Hand function limitations** – eg arthritis, MND, MS, spinal cord injury
- **Upper limb weakness or paralysis** – eg stroke, muscular dystrophy
- **Vision impairment** – reduced ability to locate or see remote controls
- **Cognitive limitations** –simplified, consistent commands
- **Chronic pain or fatigue** – where reaching for a remote is unfeasible
- **Hoist/assisted transfer** – 2 hands on the client – none on the remote.

How It Works

YourVoice connects any compatible adjustable bed to Amazon Alexa or Google Home, adding voice control alongside the standard remote. Installation requires no bed modifications and works over home Wi-Fi. The modular system can be supplied with new beds or retrofitted to existing models (see over for compatibility).
